

NAME: (Print full name)		ID:	
AU	THORITY HOLDER PROVIDING TRAINING:	SPBNDT AFFILIATE	NO.:
1.	The trainee must provide documentation of successful completion of on-the-job training and authorized industrial radiographer. (Code of Practice X-Ray section 2.4). The training RPO and Authority Holder.		·
2.	 The following reference documents are required to facilitate this training: Document No: SPBNDT/IRPAP/001, available on SPBNDT website <a a="" href="www.professional-" www.professional-"www.professional-"www.professional-"www.professional-<=""> Regulations relating to Group IV Hazardous Substances No. R. 247, 26 Feb 1993. Sec Code of Practice for Industrial Radiography (X-Ray Radiography); IAEA Specific Safety Guide No. SSG-11, 2011. Authority Holder's organization local rules. 	 	
3.	All Trainers should complete the table below:		
	Name and Surname	SPBNDT No	Specimen Signature

Document No: Form F24-4X (Supersedes F24-4) Revision 1 Issued: April 2019 Page 1 of 10

Activity	#	Date	Trainer
1. Induction	Hours	completed	Signature
Company induction.			
Introduction to the senior manager designated as having overall responsibility for overseeing radiation safety and verifying that			
industrial radiography be carried out in accordance with regulatory requirements.			
(Regulations relating to Group III Control of Electronic Products No. R. R1332, 3 Aug 1973)			
Introduction to the company RPO.			
Explain the Management structure and policies. (Company Quality Management System)			
Explain the assignment of individual responsibilities for radiation safety.			
(While the primary responsibility for radiation safety lies with the operating organization, radiographers (including trainees and			
assistants) have a responsibility to work safely and to take all reasonable actions to restrict their own exposure and those of			
other workers and members of the public)			
Explain the role of the Responsible person			
Explain initial training requirements (Code of Practice, section 5.2)			
Explain periodic training (Code of Practice, section 5.3)			
Explain 3 monthly observations (Code of Practice, section 5.4)			
Explain the Level of competence required for X-ray radiographers			
Explain and demonstrate records of training and observations (Code of Practice, section 5.5)			
Explain the education and training programme including overview of the SPBNDT Radiation safety Programme.			
(Document No: SPBNDT/IRPAP/001, available on SPBNDT website www.professional-body-ndt.org.za)			
Explain the local rules and supervision. (Specific to Authority Holders organisation)			
Explain the monitoring of workers and the workplace (Code of practice, X-Ray section 7))			
Explain Health surveillance programme. (Code of practice, X-ray section 2 and local rules)			
Explain the System for recording and reporting all relevant information relating to the control of exposures, decisions regarding			
measures for occupational radiation protection and safety, monitoring of individuals. (Local rules)			
Explain the Emergency preparedness plans. (Specific to Authority Holders organisation)			
Explain the Mechanism for the review and updating of the arrangements. (Specific to Authority Holders organisation)	_		
Explain the Regulatory compliance inspection and enforcement. (Code of Practice)			
Explain the Human factors and practical applications pertaining to the work environment including the impact of substance			
abuse, fatigue and stress. (Specific to Authority Holders organisation)			
Actual Hours			
Required Hours	16		

Document No: Form F24-4X (Supersedes F24-4) Revision 1 Issued: April 2019 Page 2 of 10

2. Facilities and Resources. (X-ray)	
Demonstrate the Company facilities.	
Demonstrate the Company resources.	
Demonstrate the use of Collimators.	
Demonstrate the use of Ancillary equipment.	
3. Equipment Specifications and Periodic Testing	
Explain and demonstrate dose equivalent rate from leakage radiation measured at one meter from the focus of the tube head.	
(Code of Practice, section 3.1)	
Explain and demonstrate the use of lead cap for covering the radiation window during warm up and testing. (Code of Practice,	
section 3.2 & 3.3)	
Explain and demonstrate the use of diaphragms. (Code of Practice, section 3.4 & 3.5)	
Explain and demonstrate the length of cable required for the various X-ray equipment kV values. (Code of Practice, section 3.6)	
Explain and demonstrate the use of a key to activate the control panel. (Code of Practice, section 3.7)	
Explain the two independent means, that indicate when X-rays are being generated.	
Explain and demonstrate Door interlocks.	
Explain and demonstrate Warning signals and notices.	
Explain and demonstrate Emergency stop buttons or pull-cords.	
Explain door switch connectors on enclosed installations. Door interlocks	
Explain and demonstrate the marking of a tube head. (Code of Practice, section 3.12)	
Explain the guidance documentation (Code of Practice, section 3.13)	
Explain and demonstrate the instruction manual for all X-ray equipment. (This should always be available with the equipment)	
Explain and demonstrate maintenance procedures	
Explain and demonstrate the equipment that may be used and the specific work to be carried out	
Explain and demonstrate the check for Air scattering of radiation (or 'sky shine') and scattering from objects outside enclosures	
without shielded roof.	
4. Specification for Enclosed Exposure Facilities (Code of Practice, section 4)	
Explain that an enclosed exposure facility is a dedicated system such as those built into a production line. It is not an exposure	
bay with walls, maze and portable equipment.	
Explain and demonstrate that the control must be placed outside the enclosure.	
Explain that the enclosed exposure facility may not be located in an area zoned for domestic use.	
Explain the facility markings, including warning signs and contact persons.	
Explain and demonstrate the positive indication when an exposure is underway.	
Explain the interlock systems.	

Document No: Form F24-4X (Supersedes F24-4) Revision 1 Issued: April 2019 Page 3 of 10

	1
Explain and demonstrate the device, which makes it possible for a person accidently left in the enclosure, to open one of the	
doors easily and leave.	
Explain and demonstrate the locking of additional doors that the operator does not control.	
Explain and demonstrate the maximum dose rate outside the exposure facility.	
(Preferably not to exceed 2.5 μSv/h (0.25 mR/h), but must not exceed 7.5 μSv/h (0.75 mR/h.)	
Explain that enclosed installations must be provided with a sign stating the maximum rating and limitations on the primary	
beam directions established for that installation.	
5. Handling Procedures (Code of Practice, section 6)	
Explain that industrial radiography may only be performed by having a personal authority from radiation control.	
Explain that a trainee industrial radiographer must only work under the direct supervision of an authorised industrial	
radiographer. This implies that a qualified radiographer must be physically present at all times during radiography work and	
that the authorised radiographer assumes full responsibility for the actions of the trainee.	
Explain that an operator may perform work within an enclosed exposure facility without a personal authority.	
6. Radiography in Open Areas	
Explain the need for work permit procedures and demon stare completion of documentation. (Own Organisation and Client)	
Explain and demonstrate Preparation for site radiography.	
Explain Cooperation with the client.	
Explain and demonstrate the wearing of TLD and use of direct-reading dosimeter and the necessity of being in possession of a	
functioning radiation monitor.	
Explain and demonstrate necessary equipment for setting up of barriers, as well as radiation warning signs including warning	
lights for night-work.	
Explain daily checks of equipment, accessories and auxiliary apparatus.	
Explain and demonstrate the use of collimators and/or other appropriate shielding material, including shielding to prevent	
backscatter.	
Explain and demonstrate the required calculation and erection of barriers.	
(Instantaneous dose rate shall not exceed 10 μSv/h {1 mRh})	
Explain and demonstrate the check of radiation levels at the barrier once the unit has been activated, and if necessary moved.	
Explain and demonstrate that no individual is exposed to radiation in excess of the following levels:	
Workers not wearing Personal Dosimeters - 20 μSv (2 mrem) in any one day.	
Members of the Public - 4 μSv (0.4 mrem) in any one day. (Code of Practice, section 6.2.5).	
Explain and demonstrate warning signs and, at night, warning lights are prominently displayed. (Code of Practice, section 6.2.6)	
Explain removing people from the demarcated area before commencing the exposure.	
Explain close liaison between operators of adjacent sites that overlap.	

Document No: Form F24-4X (Supersedes F24-4) Revision 1 Issued: April 2019 Page 4 of 10

Explain attendance near demarcated area, in order to take immediate corrective measures should any unplanned entry into	
the area take place.	
Explain that during start-up preparation or testing of x-ray tubes, a lead cap designed for this purpose must close the radiation	
window.	
Explain that the warning lamp connected to the control panel be prominently positioned near the x-ray tube.	
7. Radiography in Enclosed Exposure Facility	
Explain that this is an exposure bay with walls, maze and portable equipment.	
Explain before commencing an exposure that nobody is allowed in the enclosure.	
Explain that exposure must be terminated according to the correct termination procedures and the use of safety devices such	
as interlocks for exposure termination is not permitted.	
Explain that entry into the enclosure is not permitted prior to termination of the exposure.	
Explain rendering the unit inoperable by locking the control panel and removing the key when the facility is not in use.	
Explain compliance with all limitations on the use of enclosed installations.	
Explain that TLD must be worn by persons using enclosed facilities of this nature.	
Demonstrate the availability of written operating procedures and emergency procedures.	
Explain Procedures for radiographing unusually long items that do not fit behind closed doors.	
8. Radiation Monitoring Requirements	
Explain that no radiation worker may perform industrial radiography without a TLD issued in his/her name.	
(Members of a radiography team must not be issued with BLANK TLD's)	
Explain that all members of industrial teams, as well as any other workers who are likely to receive more than 200 μSv during	
any one day must be issued with a direct-reading dosimeter or a digital audible-alarm dosimeter, with a full-scale deflection of	
at least 2 mSv (200 mR)	
Explain that daily doses must be accurately recorded, and such records be kept for at least 5 years.	
Explain that these dosimeters must be checked for correct response at periods not exceeding 26 months.	
Explain that dosimeters must be worn at all times during the course of their work.	
Explain that a radiographic team performing radiography in an open area must use a radiation monitor (dose-rate meter) with	
a range sufficient to measure 10 μSv/h (1R/h) and that it requires calibration every 7 months.	
Explain that work must not be carried out unless dosimeters and monitors are in proper working order.	
9. Dose Limitations	
Explain that radiation doses to individuals must at all times be kept as low as is reasonable achievable (ALARA).	
Explain that radiation doses to individuals (including themselves) do not exceed the limits specified.	
(Code of Practice, section 8.2)	
Explain the information regarding medical examinations and blood tests.	

Document No: Form F24-4X (Supersedes F24-4) Revision 1 Issued: April 2019 Page 5 of 10

Evaluin natification to Padiation Control of any person being over expected or suspected everyweeter	
Explain notification to Radiation Control of any person being over exposed or suspected overexposure. 10. Emergency Procedures	
Explain emergency plans	
Explain Types of emergency as identified and included in organisations assessment repots.	-
Explain regular audits	 +
Explain the immediate action to be taken in order to prevent excessive radiation doses.	
Explain the internal and external notification procedures.	
Explain and demonstrate the procedures for dealing with the incident and returning the situation to normal.	
Explain if a direct-reading or digital audible dosimeter is found to be off-scale, the exposure must be terminated immediately	
and the occurrence must be treated as a suspected overexposure.	
Explain training exercises	
11. Practical Training The Trainee is to physically perform the following as relevant	
Prior to operations	
Use a direct reading dosimeter, audible dosimeter, personal dosimeter (TLD)issued by licensed dosimetry service, and radiation	
survey meter. (Code of Practice, section 7)	
Turn on alarming dosimeter and survey meter before starting exposure and ensure that the dosimeters and monitors are in	
place, and in proper working order.	
Check power level of batteries.	
Check equipment for valid calibration dates.	
Zero DRD prior to use and ensure a minimum of 2 mSv (200 mR) total dose range	
Continuity/Function check for radiation detection equipment	
Use all required daily records required by Authority Holder	
Perform a job hazard assessment of work area	
Procedure to quarantined broken or deficient equipment	
Post sufficient # of signs and barriers to prevent entry into area	
Evacuate persons from the controlled area	
Place equipment safely to prevent any incidents	
Radiography in Open Areas	
Perform equipment checks prior to operation	
Collimator and/or effective use of shielding	
During operations	
Verify barrier dose rates and radiation warning sign positions on first exposure using the survey meter.	

Document No: Form F24-4X (Supersedes F24-4) Revision 1 Issued: April 2019 Page 6 of 10

Operational procedures are followed.		
Use of the correct length extension cable for remote exposure control. (Code of Practice, section 3.6)		
At least 10 meters for kv's below 200		
 At least 20 meters for Kv's exceeding 200kV. 		
Implementation of ALARA and basic radiation protection principles		
Post Exposure		
Disassemble the equipment in the correct order according to the manufacturer's specifications		
Removal of posted radiation warning signs and barriers		
Sign exposure device back in to secure storage area as necessary.		
Record Keeping		
Accurately record daily doses measured by direct-reading dosimeter.		
Survey reading on surface of device		
Documenting equipment checks required by Authority Holder		
DRD readings		
Trainee supervisor consent form		
Emergency Preparedness		
Recognize an emergency situation		
Location of required emergency equipment		
Location of emergency procedures		
Initial emergency steps in an emergency		
Correct contact information		
Transportation		
Placing the equipment correctly within the vehicle for transport.		
Security		
Controlling the device throughout operations		
Explain and demonstrate storage of equipment		
Actual Hours		
Required Hours	40	
Remarks:		

Document No: Form F24-4X (Supersedes F24-4) Revision 1 Issued: April 2019 Page 7 of 10

12. Practical On the Job Work (Under direct supervision) Briefly describe the work and location.
